

Claims

1. An apparatus for installing shaft equipment for an elevator, the apparatus comprising a suspension element, the suspension element being attachable to a ceiling of an elevator shaft or an upper part of a wall of the elevator shaft, and suspension means for carrying or supporting shaft equipment at least during installation.

2. The apparatus as defined in claim 1, further comprising a mounting tool, the suspension means being set on the suspension element from a top floor by the mounting tool.

3. The apparatus as defined in claim 2, wherein the mounting tool is a bar or rope with one end provided with means for mounting the suspension device.

4. The apparatus as defined in claim 1, further comprising supporting means for supporting an overspeed governor by the suspension element at least during installation of the elevator.

5. The apparatus as defined in claim 4, further comprising a mounting tool for the means for supporting the overspeed governor to be set on the suspension element from the top floor.

6. The apparatus as defined in claim 5, wherein the mounting tool comprises a bar with one end provided with a device for the mounting of shaft equipment.
